Postdoctoral Position in Immunology and Gene Therapy
San Raffaele Telethon Institute for Gene Therapy (SR-Tiget)

Located in Milan, Italy, the San Raffaele Telethon Institute for Gene Therapy (SR-Tiget) was created in 1995 as a joint venture between the Telethon Foundation and Ospedale San Raffaele (OSR) with the mission to perform cutting-edge research in gene and cell therapy and to translate its results into therapeutic advances, focusing on genetic diseases. SR-Tiget is fully integrated within OSR and has dedicated infrastructures to support high-quality preclinical studies and proof-of-concept clinical trials.

A postdoctoral research fellow position is available in the laboratory of Dr. Alessandra Mortellaro. We are looking for a highly motivated individual to study the immunological and molecular basis of adenosine deaminase 2 deficiency, a newly discovered autoinflammatory syndrome, and implement gene therapy as a promising strategy to treat the affected patients. Collectively, these studies will contribute to advance our knowledge of autoinflammatory disorders and improve patients’ care.

Job Requirements:
• Ph.D. in Immunology, Cellular and Molecular Biology or related areas
• Solid knowledge in Immunology and Innate Immunity
• A track record of accomplishments
• Demonstrated technical independence with tissue culture, molecular and biochemical techniques, and flow cytometry. Ability in transgenic/knock-out mouse-related work is a plus.
• Ability in taking the initiative and work independently is essential
• Strong interpersonal and communicative skills are indispensable
• Proficiency in spoken and written English.

Interested candidates should send their curriculum vitae, a short statement of research interests and full contact information of two referees to:
